

Who we are

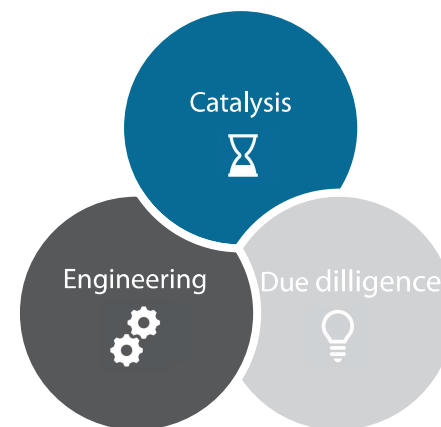

Hulteberg Chemistry & Engineering is a research and development oriented company, focusing on heterogeneous catalysis. The company was founded in 2006 and we have experience not only in formulating novel catalysts for solving difficult tasks. We also know how to design the reactors and the systems around these catalysts. For almost two decades the employees at Hulteberg have brought laboratory catalyst formulations and technology to market in many different markets and applications, large and small.

Our vision & strategy

Things are moving fast in the field of chemical engineering and catalysis and we can help you keep the pace, from idea to implementation. At Hulteberg we have specialized in research, development, production of catalysts and their implementation to enhance the time-to-market of our customers.

What we do

Our main business areas are catalysis, engineering and due diligence with the largest focus being catalysis. We cover the full chain of heterogeneous catalysis and have our own high-quality research and development as well as production.

Our collaborations over the world

Research & development

- Extensive catalyst library
- Catalyst screening and development
- Life-time testing

Scale-up

- Catalyst scale-up
- Process scale-up
- In-house or slip stream pilots

Catalyst production

- Capacity of 100 tonnes/year
- Small-volume applications, e.g. pilot testing
- Non-traditional carriers
- Flexible low-volume production
